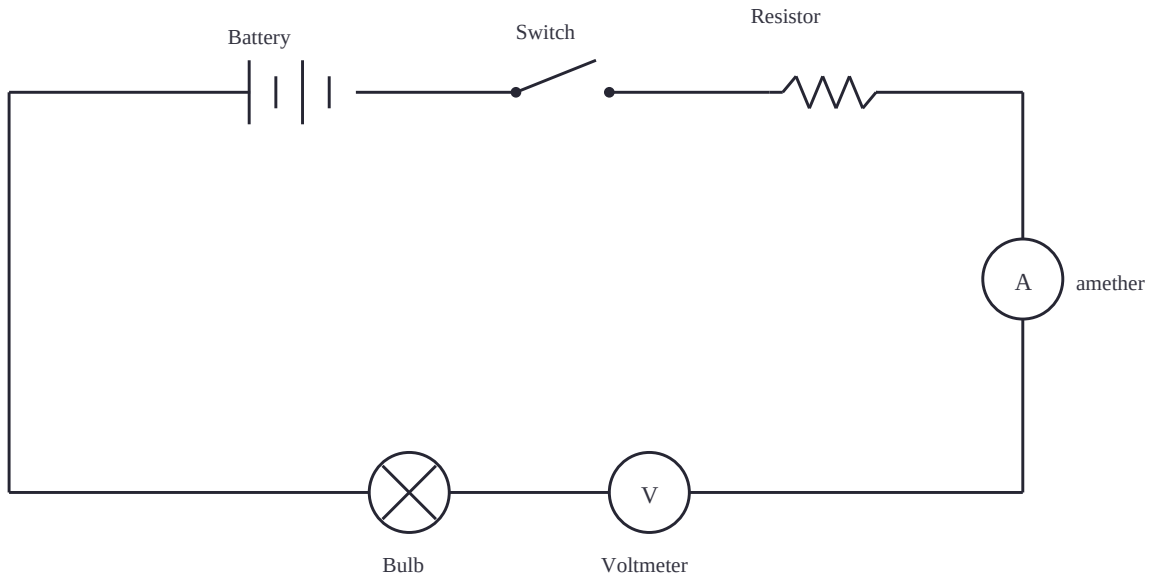
Name: Test Case - incorrect Class: 10-B Subject: Combined Paper Total: 15 marks

Question 1

An electric circuit is a wire which stores the current inside it. The battery is used to store the current and the switch is used to increase the speed of the current in the wire.

> The bulb and the resistor are connected in parallel with the battery. The ammeter is connected in parallel because it measures the voltage, and the voltmeter is connected in series with the bulb because it measures the current in the bulb.

If the resistance of the circuit is increased then the current also increases, because the resistance gives extra push to the current.



Question 2

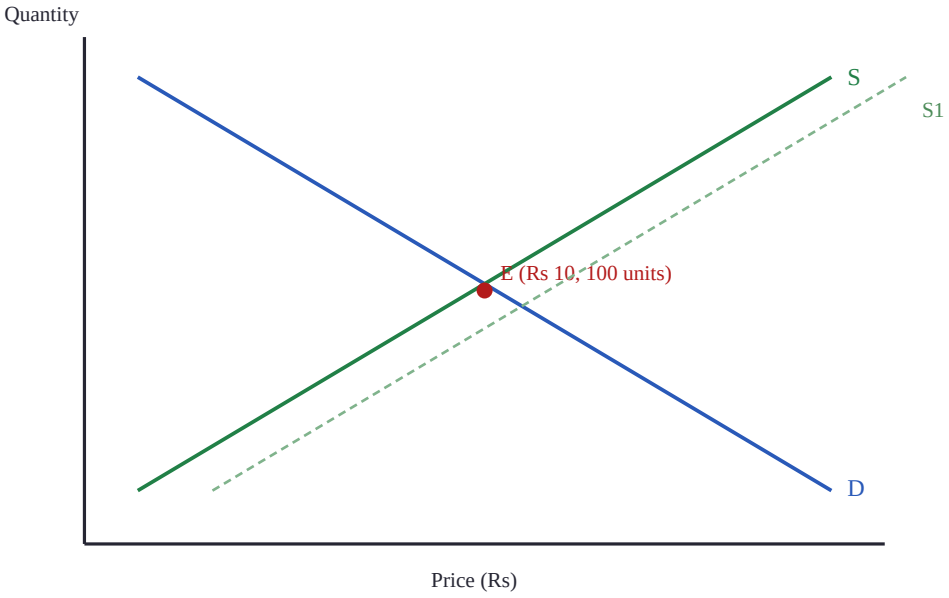
Technology is a very good thing and it is used by everybody in the world today. Mobile phones and computers are technology. Many people use technology every single day for many different purposes and it is present everywhere around us in the modern world.

Question 3

The graph shows the price and the quantity of the product in the market.

The two curves meet at the price of Rs 10 and the quantity of 100 units and this is the equilibrium point of this market.

If the cost of production increases then the supply curve shifts to the right and the new equilibrium will be at a lower price and a higher quantity.



Quantity
S
S1
E (Rs 10, 100 units)
D
Price (Rs)
