Question 1

A simple electric circuit is a closed path which allows current to flow. The battery gives the potential difference. When the switch is closed the current flows through the bulb, and when it is open no current flows.

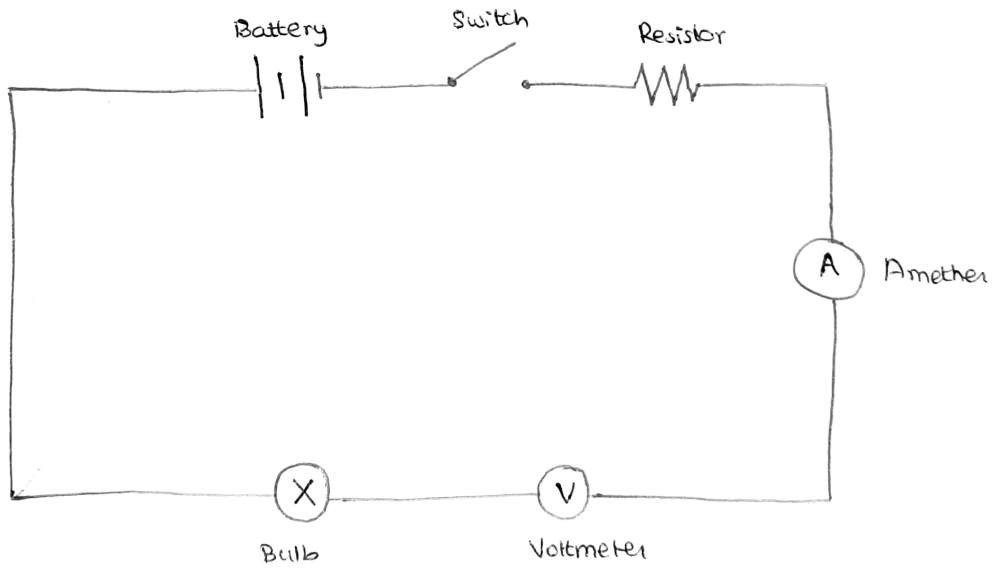

In my circuit, the battery, switch, resistor, bulb and the amether are all joined one after another in series. The amether is in series measures the current. The voltmeter is also connected in series with the bulb its voltage.

If the resistance is increased, then also increases, because a bigger more current.

1. **1. Spelling**
   Spelling: "amether" should be "ammeter".
   Correction: ammeter

2. **2. Incorrect**
   Substantive error: a voltmeter in series with the bulb would not measure the potential difference across it.
   Correction: The voltmeter must be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb. Only the ammeter goes in series.

3. **3. Incorrect**
   The stated relationship between resistance and current is inverted.
   Correction: If the voltage is constant and the resistance increases, the current decreases (V = IR).

Question 2

4

Technology has changed the way stud

4. Spelling
Spelling: "studnets" should be "students".
Correction: students

In my opinion, technology makes learning much easier and better because information which was very hard to find earlier is now available in a few seconds.

A student who does not understand a topic in class can watch a video at home and understand it properly. For example, when I could not understand the water cycle in class, I watched two videos and after that I understood the whole topic.

Technology also saves time because students do not have to search in many books, they get all the informations immediately and can spend that time on practice and revision which improves their knowledge and their marks also improve a lot and this is why every school should give tablets to all students.

Question 3

The table shows the demand and supply at different prices. I have drawn the demand curve and the suply curve. I ha… price on the horizontal axis an… on the vertical axis.

The two curves cut each other at … Rs. 40 and the quantity of 40 un… point is the equilibrium of the …

When the price is below the equilibrium price the quantity demanded becomes more than the quantity supplied, so there is a shortage and the price starts rising. When the price is above the equilibrium the quantity supplied becomes more than the quantity demanded, so there is a surplus and the price starts falling.

If the cost of production increase… curve shifts to the right side. Bec… new equilibrium will be at a h… … and a higher quantity.

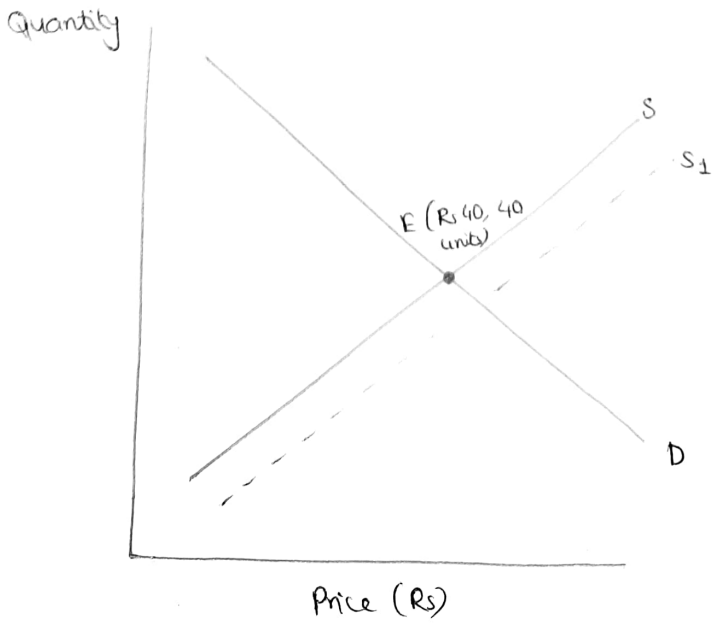

5. Incorrect
The axes are the wrong way round.
Correction: Quantity belongs on the horizontal axis and price on the vertical axis; the curves are drawn against those axes.

6. Spelling
Spelling: "suply" should be "supply".
Correction: supply

7. Incorrect
The equilibrium is read off the schedule incorrectly.
Correction: Equilibrium is at a price of Rs 30 and a quantity of 60 units - the only row of the schedule where quantity demanded equals quantity supplied.

8. Incorrect
The direction of the supply shift is reversed.
Correction: A rise in production cost makes supplying less profitable at every price, so the supply curve shifts to the LEFT / upward.

9. Incorrect
The resulting movement of equilibrium price and quantity is stated backwards.
Correction: The new equilibrium is at a higher price and a lower quantity, assuming demand is unchanged.

Marking summary

6 / 15

Confidence 55% NEEDS TEACHER REVIEW

Graded by mock (offline-heuristic-v1) - degraded mode on 3/9/2026, 9:25:13 am

Q1 - Science - 2 / 5

[1/1] Correctly represents the main circuit with battery, switch, bulb and resistor connected in a closed series path

This rubric point is met.

Evidence: "When the switch is closed the current flows through the bulb, and when it is open no current flows In my circuit, the battery, switch, resistor, bulb and the amether are all joined one after another in series."

[0/1] Correct placement of ammeter in series and voltmeter in parallel across the bulb

Substantive error: a voltmeter in series with the bulb would not measure the potential difference across it.

Evidence: "The voltmeter is also connected in series with the bulb to measure its voltage."

[1/1] Correct explanation of current flow and the function of the main components

This rubric point is met.

Evidence: "Question 1 A simple electric circuit is a closed path which allows current to flow."

[0/1] Correctly explains the relationship between resistance and current, including the relevant principle/Ohm's law

The stated relationship between resistance and current is inverted.

Evidence: "If the resistance is increased, then the current also increases, because a bigger resistance pushes more current."

[0/1] Clear, logically structured explanation with appropriate labels and current direction in the diagram

The diagram lacks clear labelling or does not show the direction of conventional current.

Q2 - English - 3 / 5

[1/1] Presents a clear position on whether/how technology affects learning

This rubric point is met.

Evidence: "In my opinion, technology makes learning much easier and better because information which was very hard to find earlier is now available in a few seconds."

[1/1] Provides relevant and logically developed arguments supporting the position

This rubric point is met.

Evidence: "In my opinion, technology makes learning much easier and better because information which was very hard to find earlier is now available in a few seconds."

[0/1] Recognises and meaningfully addresses an opposing viewpoint or limitation

No opposing viewpoint or limitation is considered; the question explicitly asks for one.

[1/1] Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims

This rubric point is met.

Evidence: "For example, when I could not understand the water cycle in class, I watched two videos and after that I understood the whole topic."

[0/1] Provides a coherent conclusion that follows from the discussion, with clear overall communication

There is no conclusion that follows from the discussion.

Q3 - Economics - 1 / 5

[0/1] Correctly plots and labels the demand and supply curves, with appropriate axes and direction

The axes are the wrong way round.

Evidence: "I have taken the price on the horizontal axis and the quantity on the vertical axis."

[0/1] Correctly identifies the equilibrium at Rs 30 and 60 units and explains why it is equilibrium

The equilibrium is read off the schedule incorrectly.

Evidence: "The two curves cut each other at the price of Rs."

[1/1] Correctly explains shortage below equilibrium and surplus above equilibrium

This rubric point is met.

Evidence: "when the price is below the equilibrium price the quantity demanded becomes more than the quantity supplied , so there is a shortage and the price starts rising."

[0/1] Correctly explains that increased production costs shift the supply curve left/upward

The direction of the supply shift is reversed.

Evidence: "If the cost of production increases, the supply curve shifts to the right side."

[0/1] Correctly explains the resulting tendency toward a higher equilibrium price and lower equilibrium quantity, with the change represented appropriately on the graph

The resulting movement of equilibrium price and quantity is stated backwards.

Evidence: "Because of this the new equilibrium will be at a lower price and a higher quantity."

Review flags

- This paper had no text layer, so the writing was transcribed from the page image before marking. Quotes and mark placements follow that transcription and should be checked against the original script.

Annotations on the paper

1. [Spelling] Spelling: "amether" should be "ammeter".
   Correction: ammeter
2. [Incorrect] Substantive error: a voltmeter in series with the bulb would not measure the potential difference across it.
   Correction: The voltmeter must be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb. Only the ammeter goes in series.
3. [Incorrect] The stated relationship between resistance and current is inverted.
   Correction: If the voltage is constant and the resistance increases, the current decreases (V = IR).
4. [Spelling] Spelling: "studnets" should be "students".
   Correction: students
5. [Incorrect] The axes are the wrong way round.
   Correction: Quantity belongs on the horizontal axis and price on the vertical axis; the curves are drawn against those axes.
6. [Spelling] Spelling: "suply" should be "supply".
   Correction: supply
7. [Incorrect] The equilibrium is read off the schedule incorrectly.
   Correction: Equilibrium is at a price of Rs 30 and a quantity of 60 units - the only row of the schedule where quantity demanded equals quantity supplied.
8. [Incorrect] The direction of the supply shift is reversed.
   Correction: A rise in production cost makes supplying less profitable at every price, so the supply curve shifts to the LEFT / upward.
9. [Incorrect] The resulting movement of equilibrium price and quantity is stated backwards.
   Correction: The new equilibrium is at a higher price and a lower quantity, assuming demand is unchanged.

Notes that could not be placed on the page

These relate to points the student did not write, or to quotes that could not be located in the paper.

- [Missing] The diagram lacks clear labelling or does not show the direction of conventional current.
- [Missing] No opposing viewpoint or limitation is considered; the question explicitly asks for one.
- [Missing] There is no conclusion that follows from the discussion.
